

SYSTEM AND METHOD FOR SELECTING ARENA SEAT LOCATIONS FOR DISPLAY

Abstract of the Disclosure

10

Arena locations are selected by chances sold to customers for recording and distributing video images of the location. A vend terminal/processor system is used to sell these chances and load them to a chance table. The chance table is accessed by a camera control processor and a response control processor to cause a video camera to record and transmit images of selected arena locations selectively to a TV live or delayed broadcast, a view screen at the arena, or to a remote customer for viewing at a display.
